

Procédure d'installation de SQL Server avec Code Igniter

Lorsque l'on crée une application avec le Framework Code Igniter, il faudra parfois utiliser SQL Server. Dans ces cas, des manipulations spécifiques sont à réaliser pour la réussite de la connexion entre l'application et le serveur.

1. Télécharger le driver SQL Server via ce lien :

<https://learn.microsoft.com/en-us/sql/connect/php/download-drivers-php-sql-server?view=sql-server-2017#download>

Microsoft Drivers 5.12 for PHP for SQL Server is the latest general availability (GA) version.
Download Microsoft Drivers for PHP for SQL Server (Windows)
GitHub Release tag v5.12.0 (Linux and macOS packages are available here)

Note
Make sure you have the latest version of the ODBC driver installed to ensure optimal performance and security. For download information, see [Download ODBC Driver for SQL Server](#).

Version information
Release number: 5.12.0
Released: January 31, 2023
If you have feedback, the best way to contact the Microsoft Drivers for PHP for SQL Server team is by filing an issue on the [GitHub repository](#).

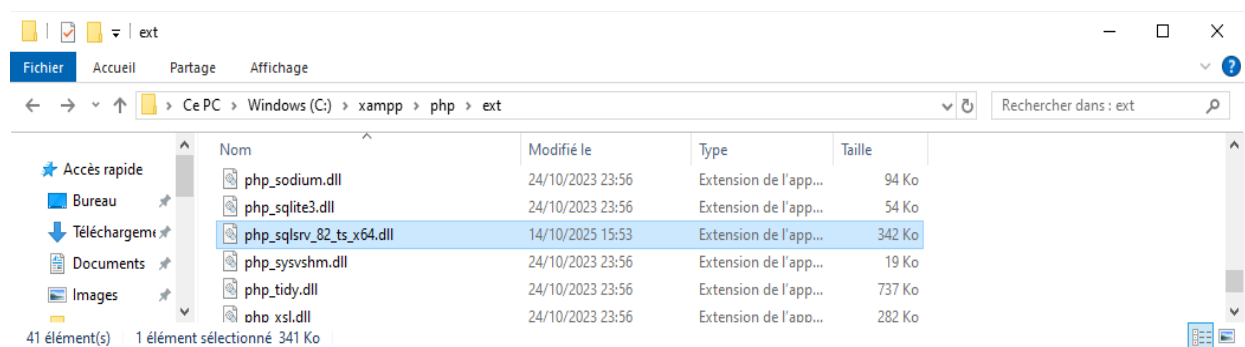

Release notes
For details about what has changed in this release, see [the release notes](#).

2. Ouvrir le fichier téléchargé compressé **SQLSRV512**, et déplacer le fichier **php_sqlsrv_82_ts_x64.dll** dans le dossier **C:\xampp\php\ext**. Ce fichier correspond à la version de PHP 8.2.

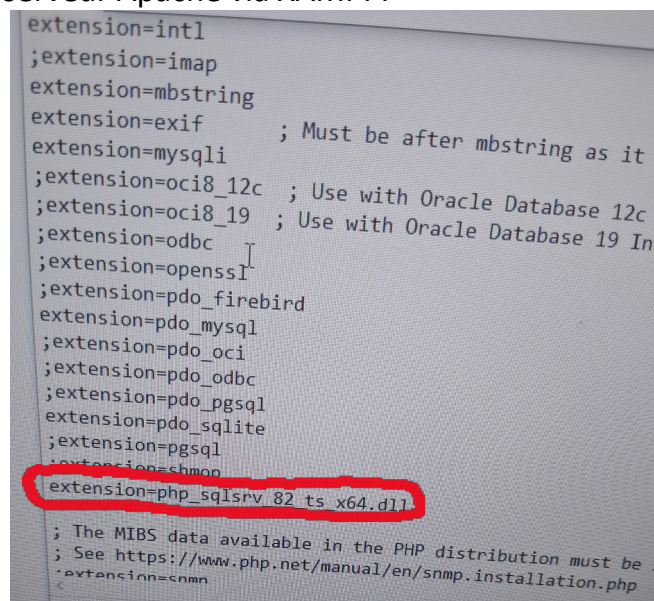

File Explorer window showing the directory **C:\xampp\php\ext**. The file **php_sqlsrv_82_ts_x64.dll** is selected.

Nom	Modifié le	Type	Taille
php_sodium.dll	24/10/2023 23:56	Extension de l'app...	94 Ko
php_sqlite3.dll	24/10/2023 23:56	Extension de l'app...	54 Ko
php_sqlsrv_82_ts_x64.dll	14/10/2025 15:53	Extension de l'app...	342 Ko
php_sysvshm.dll	24/10/2023 23:56	Extension de l'app...	19 Ko
php_tidy.dll	24/10/2023 23:56	Extension de l'app...	737 Ko
php_xsl.dll	24/10/2023 23:56	Extension de l'app...	282 Ko

3. Éditer le fichier PHP (php.ini), par exemple depuis la plateforme XAMPP :

4. Dans ce fichier, ajoutez la ligne :
`extension= php_sqlsrv_82_ts_x64.dll`
 Puis redémarrer le serveur Apache via XAMPP.

Dans **XXAMP**, cliquer sur **Admin** sur la ligne du serveur Apache, puis aller dans l'onglet **PHPInfo** et vérifier si le pilote apparaît bien à la ligne **Registered PHP Streams**.

IPv6 Support	enabled
DTrace Support	disabled
Registered PHP Streams	php, file, glob, data, http, ftp, compress.zlib, compress.bzip2, https, ftps, sqlsrv , phar
Registered Stream Socket Transports	tcp, udp, ssl, tls, tlsv1.0, tlsv1.1, tlsv1.2, tlsv1.3
Registered Stream Filters	convert.iconv.*, string.rot13, string.toupper, string.tolower, convert.*, consumed, dechunk, zlib.*, bzip2.*

5. Dans `app>config>Database.php` de votre application CodeIgniter, modifiez le fichier comme ci-dessous :

```
22    
23  /**  
24   * The default database connection.  
25   *  
26   * @var array<string, mixed>  
27   */  
28  public array $default = [  
29      'DSN'          => '',  
30      'hostname'     => 'localhost',  
31      'username'     => 'nom utilisateur',  
32      'password'     => 'mot de passe',  
33      'database'     => 'bd_aneta_presse',  
34      'DBDriver'     => 'SQLSRV',  
35      'DBPrefix'     => ,  
36      'pConnect'     => false,  
37      'DBDebug'      => true,  
38      'charset'      => 'utf8',  
39      'DBCollat'     => 'utf8_general_ci',  
40      'swapPre'      => ,  
41      'encrypt'      => false,  
42      'compress'     => false,  
43      'strictOn'     => false,  
44      'failover'     => [],  
      'port'         => 1433,
```
